

Carbon Fiber Rings

Our titanium rings are proudly made by US here in the USA.

We are a leading designer and manufacturer of premium titanium, zirconium, cobalt chrome, and stainless steel rings. Boone Titanium Rings is a leading innovator in titanium ring design and manufacturing technology. Titanium is an ideal choice for those who seek durability, as titanium is much harder than precious metals. We use aerospace grade titanium for our rings. Titanium is an ideal metal often used for wedding bands, as it is durable yet lightweight, perfect for everyday wear. Titanium is a popular metal used for mens rings. It catches people's eyes with a masculine luster. Our rings are designed with comfort in mind with a customizable ring profile. Those with sensitive skin who react to other metals will find that titanium is non-irritating and hypoallergenic.

As you browse through our titanium ring designs, keep in mind that we are able to do custom laser designs. Our fine precision lasers can cut or engrave the most intricate, detailed designs and make your laser cut titanium ring a unique work of art. We are also able to engrave a personalized message in the interior of any of our titanium rings by normal engraving equipment.

We are passionate about our craft. Boone Titanium Rings makes all rings in-house with our specialized machinery and technology. We have spent years perfecting our custom titanium ring manufacturing technique. This is why we are able to provide you with the highest quality titanium rings at prices at a fraction of our competitors'.

We stand by our word. Boone Titanium Rings is committed to providing our customers with the perfect fit titanium ring to be worn for years to come. All of our rings come with the best warranty in the industry. We boast a lightning fast turnaround rate. We process, manufacture, and ship all of our rings in a matter of hours or days, not the weeks or months of our competitors. This includes inlay rings and tension set rings.

Boone Titanium Rings is the industry leader in Meteorite Rings, Carbon fiber inlay, and Hardwood inlay rings. We pioneered the use of these materials in titanium rings. We are also leaders in titanium tension sets, making the tough asymmetric designs that others can't do. We have a complete line of Black Zirconium rings, including tension set engagement rings. We are the source for Mokume Gane and Damascus steel inlays, exclusive Mokumanium® and other precious metal inlays including Meteorite Rings. We also offer mens wedding bands in Tungsten Carbide rings and a full line of Stainless Steel rings and offer rings in Cobalt Chrome. Our titanium rings are crafted by Bruce Boone (of Boone Technologies notoriety), Steven Post, and Chris Shepherd from solid billet. Your custom made ring is created to your specifications. They are machined using CNC equipment for extreme accuracy, and all titanium rings are hand finished. We also have the lasers others can only dream about. We lead the field with our laser cut and laser engraved designs.

Titanium has distinct advantages over other ring materials. Titanium is much harder than gold, silver, or platinum, and it resists the dents or dings they get. It also costs a lot less. For this reason, many people with gold rings also get titanium rings or titanium wedding bands for everyday use. You won't find any allergic reactions or skin discoloration from wearing our titanium rings. Titanium rings weigh one third of the weight of the same rings in platinum or tungsten. They are so light and comfortable; you'll feel as though you're not wearing one. Our unique titanium rings are crafted from 6AL4V aerospace grade titanium or super 8-1-1 grade. Both are considered grade 5 titanium. We also make some pretty fancy Titanium Mouthpieces.
